

WHAT IS CLAIMED:

1. A method comprising:
 - receiving content for use in an application;
 - 5 reviewing the content;
 - automatically sequestering the content from the application based on the reviewing; and
 - forming a reason associated with the sequestering the content.
- 10 2. The method according to Claim 1 further comprising attaching the reason with the content.
3. The method according to Claim 1 wherein the content includes one of a photograph, music, a document, and a video.
- 15 4. The method according to Claim 1 further comprising storing the content in an off-line storage device.
5. The method according to Claim 1 wherein the reason provides an
20 explanation of the sequestering the content.
6. The method according to Claim 1 wherein the sequestering the content prevents the content from being accessed by the application.

7. The method according to Claim 1 wherein the sequestering the content prevents the content from being accessed by a submitter of the content through the application.

5 8. The method according to Claim 1 further comprising storing format information associated with the content in an off-line storage device.

9. The method according to Claim 1 wherein the sequestering the content further comprises removing the content from the application.

10

10. The method according to Claim 1 wherein the application includes one of an electronic photo album application, a music sharing application, and a file sharing application.

15 11. The method according to Claim 1 further comprising notifying a submitter of the content that the content is not acceptable.

12. The method according to Claim 1 further comprising returning the content and format information associated with the content to a submitter.

20

13. The method according to Claim 1 further comprising restoring the content and format information associated with the content to the application.

14. A system comprising:

means for receiving content for use in an application;

means for reviewing the content;

means for automatically sequestering the content from the

5 application based on the reviewing; and

means for forming a reason associated with the sequestering the
content.

15. A method comprising:

10 receiving content for use with an application;

determining whether the content is one of acceptable content and
unacceptable content;

removing the unacceptable content from the application;

forming an explanation for the unacceptable content; and

15 storing the unacceptable content and the explanation in an off-line
storage device.

16. The method according to Claim 15 wherein the content includes one of a
photograph, music, a document, and a video.

20

17. The method according to Claim 15 wherein the removing the content
prevents the content from being accessed by a submitter of the content through
the application.

18. The method according to Claim 15 further comprising storing format information associated with the content in the off-line storage device.

5 19. The method according to Claim 18 wherein the format information includes one of location information of the content, background color information for the content, and caption information describing the content.

20. The method according to Claim 15 wherein the application includes one of
10 an electronic photo album application, a music sharing application, and a file sharing application.

21. The method according to Claim 15 further comprising notifying a submitter that the content is classified as the unacceptable content.

15

22. The method according to Claim 15 further comprising returning the content and format information associated with the content to a submitter.

23. The method according to Claim 15 further comprising restoring the
20 unacceptable content and format information associated with the unacceptable content to the application.

24. A system, comprising:

a review module configured for determining whether content offered
by a submitter is unacceptable content; and

an off-line storage module configured for automatically storing the
unacceptable content based on the review module wherein access to the
5 unacceptable content is unavailable to the submitter.

25. The system according to Claim 24 further comprising a capture module
configured to identify the content.

10 26. The system according to Claim 24 wherein the review module determines
the unacceptable content by criteria established through a terms of service
agreement.

15 27. The system according to Claim 24 further comprising an interface module
configured for automatically notifying the submitter when the content is
considered the unacceptable content.

28. The system according to Claim 24 wherein the off-line storage module is
configured to store format information associated with the unacceptable content.

20

29. The system according to Claim 24 further comprising an interface module
configured for automatically notifying an application to remove the unacceptable
content.

30. A computer-readable medium having computer executable instructions for performing a method comprising:

receiving content for use with an application;

5 determining whether the content is one of acceptable content and unacceptable content;

removing the unacceptable content from the application;

forming an explanation for the unacceptable content; and

10 storing the unacceptable content and the explanation in an off-line storage device.
